

# Ubuntu Linux Server using Virtual Box

Virtual Box: [virtual box link](#)

## li Download Ubuntu Images:

On the student distrib drive (**M:\OS 2 Ubuntu virtual images\virtual box**) : you will find an images for the virtual box ubuntu image : **ubuntu-14.04-server-i386.7z**

III.

### Running linux on the PC in the Computer Labs

- Copy the selected archive file to a folder on the D: drive
- extract the entire archive by right--clicking on the downloaded file and choosing *"Extract Here"*

### Running linux on your PC/Laptop (The instructions have been tested for windows 7)

Copy the ubuntu image file from the student drive to a folder on your PC/Laptop.

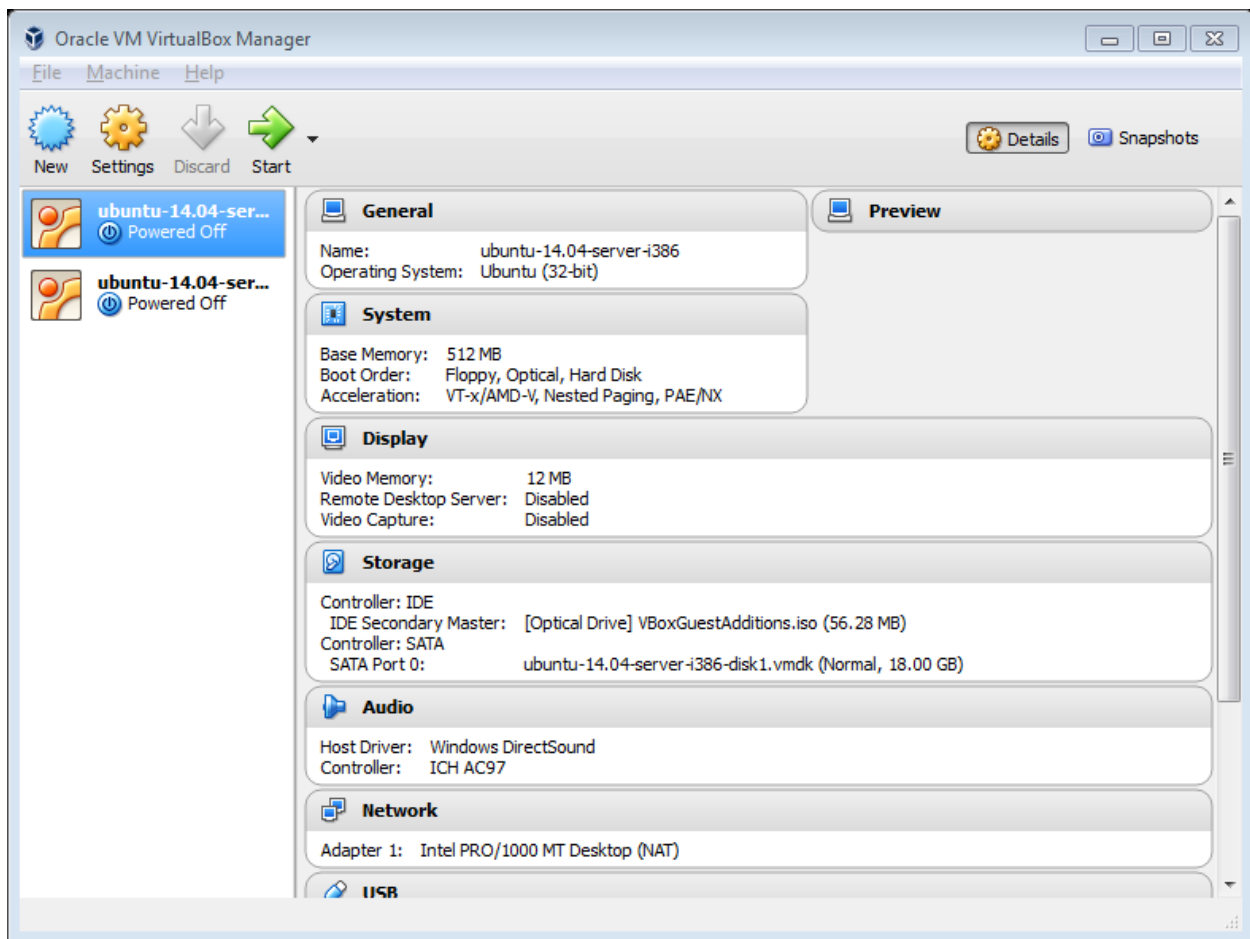

extract the entire archive by right--clicking on the downloaded file and choosing *"Extract Here"*

.

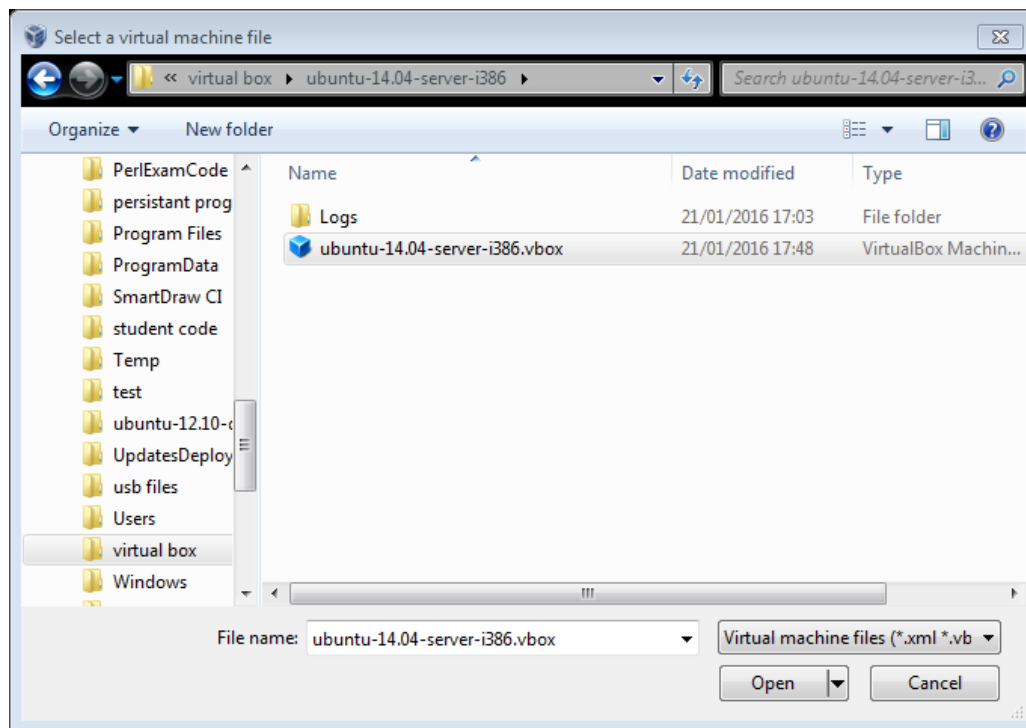

## IV. Virtual box installation

Open virtual box and go to menu option: **Machine -> add.** (*your installation will not*

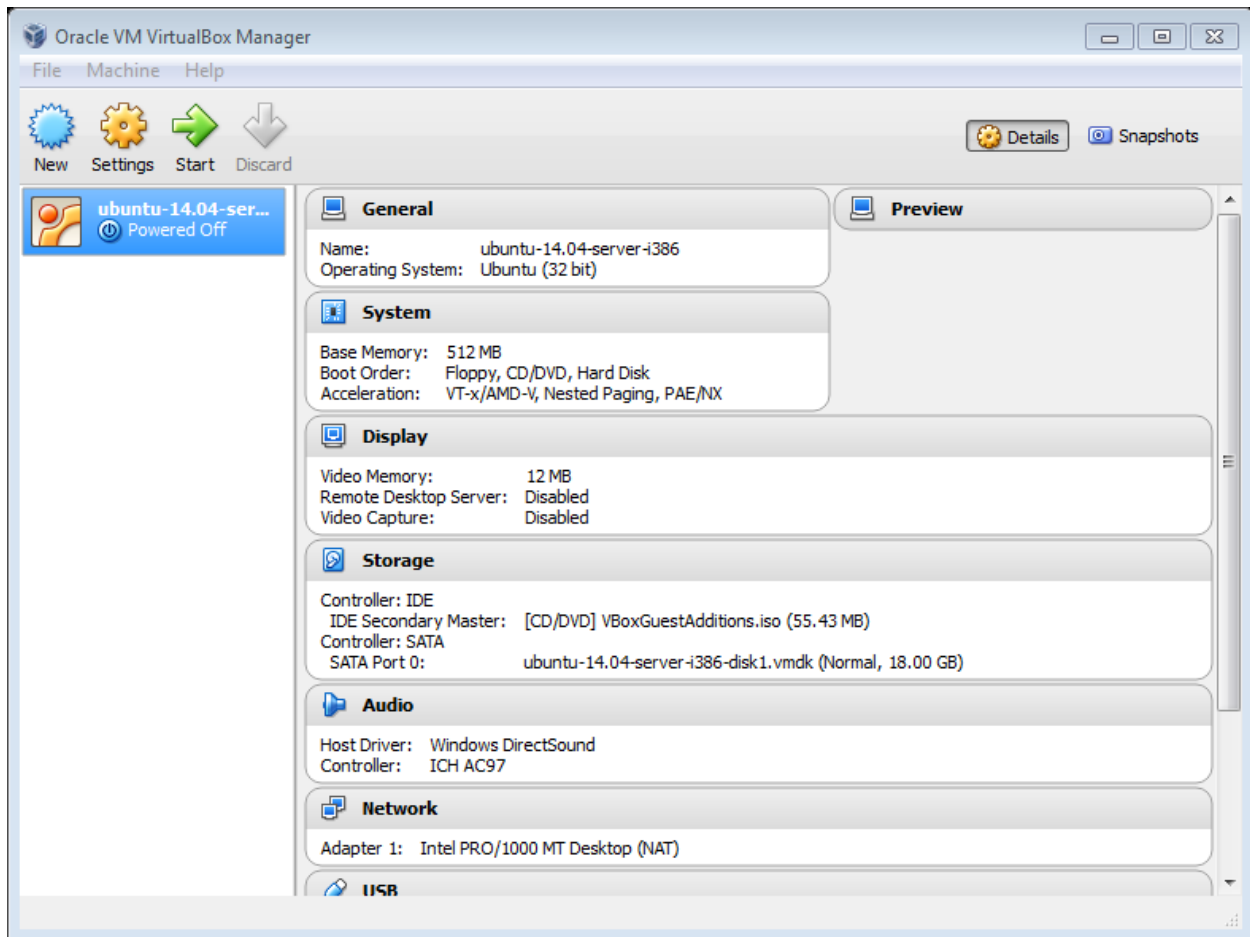

*have the images shown in the left hand window in the diagram below )*

browse to the folder on the PC/Laptop and click on the *vbox file* as shown below

It will give you the following

Click on Start and when prompted input:

User name is **ubuntu**

Password: **reverse** (note you will not see the password appear on the command line window)

. it should then give you the following command line virtual box window:
